Programming Hint for Part (f):

The command "SMPLIF" chooses the observations which yields fitted values with the desired sign. For example, after running a regression,

SMPLIF @RES<=0;

will select the observations which yield negative or zero residuals for the rest of the program, unless another selection is made. In the meanwhile, in the output TSP will report

Current sample: 1 to 2, 4 to 5, ..., 140 to 140 (67 obs.)
